Attn: Dr. Nikos Bogonikolos

SUBJECT: Pilot Deployment of medical data documentation and retrieval equipment

The Municipality of Ioannina is currently developing its Sustainable Development Plan funded by R.O.P 2014 -2020 of Epirus. A specific action is to be developed which is related to improving access to affordable, sustainable and high-quality services, including healthcare and social services of general interest.

The Municipal Authority has decided to implement an action related to the provision of social care services with the primary goal of sensitive social groups (chronic sufferers, the elderly, the disabled). These groups are currently supported within the frames of another horizontal program, named "Help at Home".

Your proposition for the development of the Tap2sos solution finds us supportive, since we are convinced that it will prove as an added value solution for our efforts towards the advancement of health care services to patients with diabetes, to the elderly, for people with disabilities and for people with chronic diseases.

Thus, we fully support your proposition and we will arrange all necessary procedures towards the deployment of the solution.

The Vice Mayor of the Municipality of Ioannina

George Arletos

Dear Dr. Bogonikolos,

As you already know **“Care for the mentally disabled of Pieria”, aka “Merimna Katerinis” in Greek, is a non-profit NGO** that was founded in 1979 in Katerini. **Its purpose is to advance the rights and well-being of disabled persons and specifically the one with mental disability.**

Currently we have in operation **two facilities that provide Day Care** to the persons of the province of Pieria with mental disability. Their total capacity is 92 people with a projection of increasing this number to 140 in two years. At these facilities, among the day care, there are also programs of therapies (speech therapy, occupational therapy, physiotherapy), preparation for autonomous or semi- autonomous living, sports, leisure, psychological support etc.

Beginning December 2018 there are also in operation **three house of semi-autonomous living** where a total 12 people will be accommodated. Our goal is to expand this action and make a net of house through the province.

To these ends, your proposition for the development of the Tap2sos solution finds us supportive, since we are convinced that it will prove as an added value solution for our efforts towards the advancement of health care services to our people.

The Legal Representative
Karapoulios Dimitrios

SUBJECT: Pilot Deployment of medical data documentation and retrieval equipment

The Municipality of Katerini has been deploying its Sustainable Development Plan since year 2017. Within its frame, a specific action is to be developed which is related to improving access to affordable, sustainable and high-quality services, including healthcare and social services of general interest.

Part of this action is the provision of social care services with the primary goal of sensitive social groups (chronic sufferers, the elderly, the disabled).

Thus, Tap2sos has proven as a reliable solution for patients with diabetes, for the elderly, for unaccompanied children, for people requiring special attention, for people with disabilities, for people with chronic diseases or terminal conditions, for Alzheimer patients and for many others in need of providing identification information 'on the spot'.

Given that the decisions required by the current legislation of collective bodies of the Municipality of Katerini to allocate support for the pilot operation should be taken, a comprehensive action plan should be presented, which will include, among other things, the obligations that will be undertaken by the Municipality of Katerini.

The Mayor of the Municipality of Katerini

Savvas Chionidis
